## We produce Umbilical in our premises at Ågotnes

We have our own machine for bundling of hydraulic hoses or electric cables. Our engineers prepare drawings and production drawings quickly and efficiently. Locally, we can assemble up to 7 lines of bundles of hydraulic hoses where we apply a protective outer jacket. This makes it easier for users to spool in or out the bundle in a controlled manner, as well as ensuring that cables or hoses are not subject to direct wear and tear in use.

We also offer engineering and project support for optimal design of electrical and signal cables, hoses, umbilicals and custom designs.

Anything you want to know about our umbilical production.

Please contact us - we have the expertise and experience, and can show production by appointment.

### **Additional information:**

Production and assembly of Hotlines, Umbilicals or Bundles
