Sheave for umbilical - cables or hose

Banana slice must be subject to a maintenance program and a minimum of 12 months control, in accordance with the manufacturer's instructions

- Rollers are secured with two independent barriers. For example, through bolt with nut and split pin
- Banana slice is only used for the purpose for which it is designed, ie use for hanging wire is not permitted
- Installation of umbilical cord should be done on deck and support rollers should be reinstalled and secured
- Sheave from Bluesolutions comes with user manual / maintenance instructions for the equipment.
- Washer and suspension are marked with color valid for the year the delivery occurs.
- Sheave can be delivered in a number of different dimensions designed according to the purpose for which the equipment is attached. Sheave is delivered produced in appropriate steel qualities depending on where the equipment is used.
