

Hydratron Pressure Pump 414Bar in Frame

Selection	Value
ID Number	
Ex Sone	1
Max Working pressure	414 bar
Max Gross weight	112 kg
Max Flow	31.7 l / min
Pump Type	DHDA-33

Hydratron Pressure pump type DHDA33

In our rental fleet you will find various pumps and specifications. All according to market requirements, this includes ATEX and Norsok specifications.

As an example, the Hydratron Double Airhead Double Acting Series, Air Driven Liquid Pump, is a reciprocating positive displacement pump with a directly connected, integrated linear reciprocating air motor designed to generate high pressure fluid flow.

The increase in pressure is made possible by the area ratio between the two larger diameter air drive pistons which are directly connected to two smaller diameter liquid pistons. By using our various material and sealing options, they are suitable for pumping a wide range of liquids, including water, oil, water / glycol and many other chemical liquids.
